

INTEGRATED ENVIRONMENTAL POLICY

At SACI, a company dedicated to the design, development, and manufacture of current transformers, measuring instruments, and control systems, we regard environmental sustainability as a strategic pillar that is inseparable from our commitment to excellence in Quality (ISO 9001) and Occupational Health and Safety (ISO 45001).

In line with our Integrated Management System and in compliance with ISO 14001:2015, SACI's Management provides the organization with the necessary resources and is firmly committed to the following principles:

- **Environmental Protection and Pollution Prevention:** Proactively mitigate the environmental impacts arising from our processes. Ensure the proper segregation and management of waste at its source.
- **Energy Transition and Climate Action:** Optimize the use of natural resources and improve energy efficiency across our processes and facilities. Promote the decarbonization of our operations through on-site solar photovoltaic self-generation infrastructure and continuously measure, monitor, and reduce our Carbon Footprint (Scopes 1 and 2).
- **Legal and Regulatory Compliance:** Ensure strict compliance with all applicable environmental legislation and regulations at the local, regional, national, and European levels, including the Environmental Liability Law and specific regulations governing waste management and emissions.
- **Continuous Improvement of Environmental Performance:** Periodically assess our environmental aspects under normal, abnormal, and emergency operating conditions. Establish measurable environmental objectives and targets, reviewed annually, to drive the continuous improvement of our management system.
- **Culture, Participation, and Awareness:** Foster environmental competence, awareness, and consultation among all employees and collaborators. Promote good environmental practices throughout our production lines, workshops, and administrative office activities.

This policy provides the framework for establishing the organization's environmental objectives. It is communicated and understood throughout the organization, maintained as up-to-date documented information, and made fully available to all interested parties.
